

**Before the
Federal Communications Commission
Washington, D.C. 20554**

In the Matter of

Amendment of Amateur Radio
Service Rules To Provide For A New
Entry Level Amateur Radio Class

RM-10870

I, Christopher Robison, residing at 88 W Market St, Tiffin, OH 44883, as an individual and as a holder of an amateur station license KC8QOM wish to make my comments to this rule-making proposal that is currently before the Federal Communications Commission for consideration.

After having reviewed the copy of the original document filed with the FCC and considering the full content of the proposal I wish to voice my comments to this proposal.

- 1) This proposal is very straight and to the point, and of the many differing proposals before the FCC this is one of merit that should be more fully considered for adoption.
- 2) This proposal is productive to the betterment of amateur radio in that it is suggesting a very simplified license structure that would be easy to maintain, would have the least impact on the resources of the FCC in initial implementation and would be a logical progression path for the operators in the amateur radio service.
- 3) This proposal recognizes that Morse code is an operating mode and should not be a barrier to a person entering the amateur radio service.

In conclusion, I urge the FCC to support this proposal and move forward with these suggested changes in a timely manner.

Christopher Robison, KC8QOM
88 W Market Street
